Product number: 250101, incl. BlackLine 42H Touch Table Stand

Product number: 250102, incl. BlackLine 49V Touch Totem

A COMPLETE SOLUTION

Our INFORMATION KIOSK TOUCH - STANDARD PACKAGE comprises of VisioSign software, a BlackLine information kiosk of your choice and an eye-catching design, creating an efficient touch solution, which is fully integrated into the VisioSign Cloud.

VisioSign's information kiosk solutions are regarded as some of the most user-friendly and reliable systems on the market, and are utilized by both local and international companies, including government agencies across Europe.

This competitive package includes:

- An elegant BlackLine information kiosk, complete with our VisioSign player
- Ready-made touch sensitive templates, enabling our customers to incorporate their own logo and custom colours
- The VisioSign Touch Module, enabling the user to maintain and update content

BLACKLINE INFORMATION KIOSK INCL. VISIOSIGN PLAYER

The beauty of these elegant information kiosks, in addition to their clean aesthetic and full HD professional touch display is how easy they are to install, operate, maintain, and service. These kiosks can present eye-catching content to any target audience, whether it is guests, students or your own employees.

Throughout the design process, we have always made durability, reliability; good touch functionality and a sleek contemporary look our priority, and our information kiosks are no exception. Our information kiosks are part of the BlackLine product range, which also includes meeting room screens and large-size displays in the same design and high quality.

READY-MADE TEMPLATES WITH YOUR OWN LOGO AND COLORS

You can easily customize the content on your new screens using our user friendly ready - made templates. These template designs typically include visual essentials such as: time and date, a large information field with a number of touch-buttons, (which activate a predetermined content in form of text), pictures, videos and links to web-content. You can also add further layers of information using the touch function via the editor interface.

VISIOSIGN TOUCH MODULE

The Visiosign Touch Module allows you to build a menu structure, which is anchored to a series of touch-buttons on the selected template. The content within each menu is then maintained through the editor interface in the VisioSign Cloud solution by adding or removing content.

FULLY INTEGRATED INTO VISIOSIGN CLOUD

One of the added benefits of VisioSign's products is how they make it so easy to communicate with your target audiences at all times. You can even broadcast different content on individual screens, so information can be centralized and disseminated to a larger or smaller number of local displays. Local content can also be mixed with common messages or slogans.
