Product number: 250103, incl. BlackLine 32H Touch Table stand
Product number: 250104, incl. BlackLine 42H Touch Table stand
Product number: 250105, incl. BlackLine 49V Touch Totem

A COMPLETE SOLUTION

Our stylish information kiosks come readily equipped with the unique and intuitive VisioSign software, combining beauty and functionality for your customers and guests use.

The setup of these kiosks, together with the touch screen functionality creates an effortless user experience, which is fully integrated into the VisioSign's Cloud.

We cater for a wide range of organisations, from independent local businesses to large international companies. Even Government agencies across Europe are fans of VisioSign's products, which are regarded as some of the most user-friendly and reliable systems on the market.

This package includes:

- The stylish and resourceful BlackLine information kiosk, complete with the readily-installed VisioSign Player.
- A selection of convenient touch-templates, so your new kiosk can be available to use without delay. These handy templates can also be personalised with your own logo and colour scheme.
- The VisioSign Touch Module is also included in this package, enabling you to maintain and update the information and layout contained within your Kiosk's display at the touch of a button.
- Our information kiosk package also boasts the helpful and effective VisioSign Wayfinder Module, enabling the user to effectively navigate the way to their desired location within your premises.

BLACKLINE INFORMATION KIOSK INCL. VISIOSIGN PLAYER

These elegant information kiosks possess an elegant yet sleek appearance, and feature a Full HD professional touch display.

We pride ourselves on the fact our products are easy to install, operate and maintain. These kiosks are no exception, and are ideal for creating eye catching, engaging presentations for any target audience, whether it is for guests, students, employees or your valued clients.

Throughout the design process, we have ensured that our focus remains on durability, reliability, excellent touch functionality, whilst maintaining a contemporary style. These information kiosks are part of the BlackLine product range, which also includes meeting room screens and large-size displays in the same exceptional design and quality.

READY-MADE TEMPLATES WITH YOUR OWN LOGO AND COLORS

Our template designs typically include the following essentials:

- Time and date
- A large information field containing a selection of touch-buttons. When selected, these buttons activate a predetermined content in the form of text, pictures, video or links to your web-content.
- The touch function enables the addition of further layers of information via the editor interface.

VISIOSIGN TOUCH MODULE

The Touch Module allows you to build an effective menu structure, which is anchored to a series of touch-buttons on the selected template. The content within each menu is then maintained through the editor interface via the VisioSign Cloud solution by adding or removing content.

VISIOSIGN WAYFINDER MODULE

The practical Wayfinder module helps the user to navigate their way to their desired location within your premises. Your visitors can use large touch screens to search for their required persons or facilities and easily locate them by viewing the route to their location on a map. This program can also provide further particulars, such as precise locations of the facilities in a specific area, for example; meeting rooms, lavatories, elevators, and so on. As you can imagine, this will inevitably improve the people-flow inside your building, in addition to providing the user with an instant and effective overview of your premises.

The designs of these maps are custom created according to each customer's individual taste, in collaboration with our graphic designer. The appearance of the map itself may contain a variety of markings, colours, lights, arrows, in either 2D or 3D. In addition to all of these elements, the maps will incorporate all fundamentals to allow effortless navigation around your building. This package includes the design of a map for 1 floor/location, which is based on the blueprint provided by the customer.

FULLY INTEGRATED INTO VISIOSIGN CLOUD

VisioSign products make it easy to communicate to target audiences at all times with different content on individual screens. Information can be centralized and disseminated to a larger or smaller number of local displays so that local content is mixed with common messages.

OPTIONS

- Available in your own RAL-colours, mat or glossy
- Your own logo can be printed on the front
- Extra floor/location maps can be purchased
- The preparation and drawing of the maps can be executed by our fully qualified and experienced design team.
